DISTRIBUTION BY DESIGN

# 1 Our Company

## The Regional Service With national resources

### THE COMPANY

Newhall Janitorial has established an outstanding reputation for customer service as a specialist distributor of cleaning and hygiene products. Originally part of John Hall Group, Newhall has operated independently since 1988.

### SPECIALIST SUPPORT

Newhall works with customers to provide products, training and systems complying with the latest legislation to create Total Value Programmes which keep cleaning and hygiene costs to a minimum.

As a member of The Nationwide Group the benefits of the local/regional provider extends to a national distribution without losing the personal, local touch.

### COMMITMENT TO QUALITY

Newhall is committed to the quality of its products and customer service. It selects from the leading manufacturers in the industry and great importance is placed on speed and efficiency of supply.

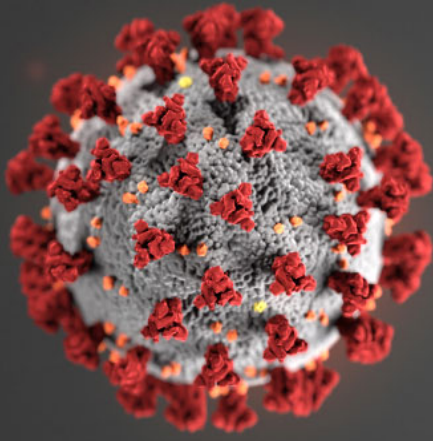

### TECHNICAL SUPPORT

Our investment in technical support facilities includes, service engineering support for all types of floor maintenance machines from vacuum cleaners to scrubber driers, auto dosed ware - washing and on premise laundry systems all designed to deliver consistent results, controlled cost and minimum downtime. Service maintenance and PAT testing contracts are available.

***Your guarantee of quality products and service tailored to meet the specific and diverse needs of our customers.***

# INFECTION CONTROL AND CLEANING

Cleaning is an essential MUST in any organisation with a duty of care to ensure that all persons present or visiting are within a safe and clean environment, with focus being on:

- Reducing the risk of contamination
- Removing or preventing waste food, grease, dirt and rubbish attracting pests
- Helping prolong the life of surfaces/floor covers and ensure slips and falls are prevented
- Giving a pleasant and safe working environment

**Cleaners play a vitally important part within any team**

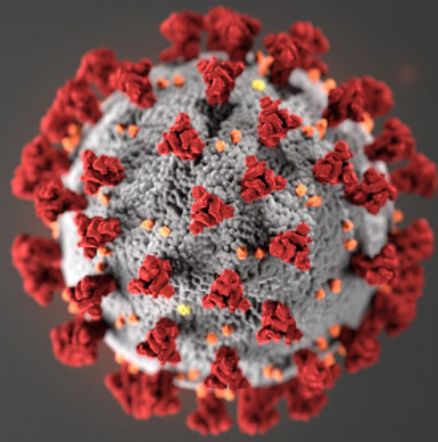

**Infection Control & Germs - Germs are spread by hands**

Germs are transmitted by hand, from person to person and to object. The frequency of hand contact on areas can create 'germ hotspots' and can increase infection rates and the spreading of bacteria. Adequate and effective cleaning for infection control is imperative.

## Top Tips for Infection Control

1. Plan (Don't Panic)
2. Cover all Bases
3. Identify your daily touch points
4. Wash and dry your hands after each area
5. Dispose or sterilise

# ANTI MICROBIAL ACTIVITY

## ANTIMICROBIAL ACTIVITY REFERS TO THE PROCESS OF KILLING OR INHIBITING THE DISEASE CAUSING MICROBES - ANTIMICROBIAL MAY BE ANTI-BACTERIAL, ANTI-FUNGAL OR ANTIVIRAL.

*The following details efficacy accreditations relating to antimicrobial activities and depends upon the recommended contact time the product has been left on the surface for. This information is for guidance only as % kill rate is variable from product to product - we would always suggest you read the relevant efficacy data for each product before use.*

### **BS EN1040**

Quantitative suspension test to evaluate basic bactericidal activity of chemical disinfectants and antiseptics. Products that can be tested. Active substances (antibacterial biocides) and formulations planned to be used in food, industrial, domestic, institutional, medical and veterinary areas.

### **BS EN1275**

Chemical disinfectants and antiseptics. Quantitative suspension test for the evaluation of basic fungicidal or basic yeasticidal activity of chemical disinfectants and antiseptics.

### **BS EN1276**

This is probably the most common of the standards which need to be met. broadly regulates the bactericidal efficacy of cleaning fluids and sprays, in particular this deals with E-Coli and is vital as a safeguard to guarantee the performance of many cleaning resources used in kitchen and food preparation areas. Chemical cleaning solutions are tested to make sure that they can destroy the requisite level of 99.999% of bacteria in 5 minutes.

### **BS EN1500**

Chemical disinfectants. Mostly regulates hand sanitisers and hygienic hand rubs. This standard was initially introduced in 1997 but has been updated as of 2013.

### **BS EN1650**

Quantitative suspension test for the evaluation of fungicidal or yeasticidal activity of chemical disinfectants and antiseptics used in food, industrial, domestic and institutional areas.

### **BS EN12054**

Chemical disinfectants. Quantitative suspension test for the evaluation of bactericidal activity of products for hygienic and surgical handrub and handwash used in human medicine.

### **BS EN12791**

The test assesses whether a product for surgical hand disinfection reduces the release of the flora of clean hands. This test is used both for products used in surgical hand disinfection by friction, as for hygienic handwashing.

### **BS EN13624**

Chemical disinfectants and antiseptics. Quantitative suspension test for the evaluation of fungicidal or yeasticidal activity in the medical area.

### **BS EN13727**

Mandatory phase 2 step 1 suspension test for disinfectants intended for use in the medical area. It applies to products that are used in the medical area in the fields of hygienic handrub, hygienic handwash, surgical handrub, surgical handwash, instrument disinfection by immersion, and surface disinfection by wiping, spraying, flooding or other means.

# ANTI MICROBIAL ACTIVITY

All biocidal products also require a BPR Regulation EU 528/2012 authorisation before they can be placed on the market, and the active substances contained in that biocidal product must be previously approved. The biocidal products regulation (BPR, Regulation (EU) 528/2012) concerns the placing on the market and use of biocidal products, which are used to protect humans, animals, materials or articles against harmful organisms like pests or bacteria, by the action of the active substances contained in the biocidal product.

## **BS EN13697**

Quantitative non-porous surface test for the evaluation of bactericidal and/or fungicidal activity of chemical disinfectants used in food, industrial, domestic and institutional area.

## **BS EN13704**

Quantitative suspension test for the evaluation of sporicidal activity of chemical disinfectants used in food, industrial, domestic and institutional areas.

## **BS EN13727**

Quantitative suspension test designed to evaluate bactericidal activity.

## **BS EN14347**

Chemical disinfectants and antiseptics. Quantitative suspension test for the evaluation of mycobactericidal activity of chemical disinfectants in the medical area including instrument disinfectants.

## **BS EN14348**

Chemical disinfectants and antiseptics. Quantitative suspension test for the evaluation of mycobactericidal activity of chemical disinfectants in the medical area including instrument disinfectants.

## **BS EN14349**

Quantitative surface test for the evaluation of bactericidal activity of chemical disinfectants and antiseptics used in the veterinary area on non-porous surfaces without mechanical action.

## **BS EN14476**

Quantitative suspension test for the evaluation of virucidal activity of chemical disinfectants and antiseptics used in the veterinary area.

## **BS EN14561**

Specifies a carrier test for establishing whether a chemical disinfectant for use on instruments (surgical instruments, anaesthesia material, endoscopes etc.) has a bactericidal activity in the fields described in the scope.

## **BS EN14562**

Specifies a carrier test for establishing whether a chemical disinfectant for use on instruments (surgical instruments, anaesthesia material, endoscopes etc.) has a fungicidal or yeasticidal activity in the fields described in the scope.

## **BS EN14563**

Chemical disinfectants and antiseptics. Quantitative carrier test for the evaluation of mycobactericidal or tuberculocidal activity of chemical disinfectants used for instruments in the medical area.

## **BS EN16615**

It is a quantitative test method for the evaluation of bactericidal and yeasticidal activity of disinfectant wipes intended for use in the medical area. The wipe is tested on a non-porous surface with mechanical action.
